

Optimize your energy management and move towards excellence!

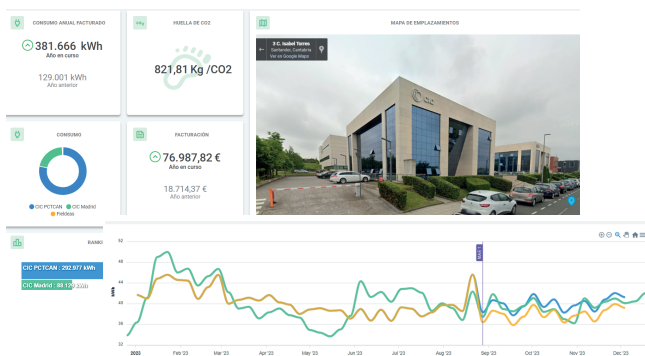

A solution for monitoring energy KPIs and ISO 50001 compliance

Bon0@cic.es

Our vertical monitoring software offers a comprehensive solution for energy KPI management and ISO 50001 compliance.

Designed for companies committed to energy efficiency and the optimization of resources and costs, this tool provides a detailed and centralized view of key data related to energy consumption and management.

Benefits

Sustainable Savings: Optimize your operations and reduce costs by accurately monitoring and controlling your energy consumption.

Integral Vision: 360° vision of your consumption patterns in real time, allowing you to identify opportunities to improve efficiency and reduce waste.

Total Control: Complete control over your energy costs, allowing you to adjust and optimize according to the changing needs of your business.

Carbon Footprint Reduction: Contribute to environmental sustainability by reducing your carbon footprint, promoting a responsible corporate image committed to the environment.

Ease of Use: Intuitive and easy-to-use interface, allowing your team to quickly adopt the software's functionalities and maximize its efficiency.

Features

Energy KPI management

Enables management of key performance indicators related to energy consumption, providing accurate metrics to evaluate performance

ISO 50001 compliance

Facilitates compliance with ISO 50001 by providing specific tools for requirements tracking and reporting

Predictive Analytics

Uses advanced analytics to predict trends and consumption patterns, facilitating proactive decision making to maximize energy efficiency

Optimize, save and lead the change towards sustainability
with our BONO Energy Management Platform

Your 360° vision is waiting for you, are you ready to transform?

Case Study: Industrial Energy Optimization

Bosch, a leading industrial company, was faced with the challenge of meeting the stringent standards of ISO-50001 in its energy management system. Despite being ISO-50001 certified, they were facing difficulties in maintaining structured and documented follow-up projects in accordance with the requirements of the standard.

By adopting our specialized tool, Bosch was able to significantly simplify this process. The tool provided a clear structure and a step-by-step guide to generate essential monitoring projects efficiently. This not only allowed Bosch to maintain their certification, but also helped them to optimize their energy management system, identifying areas for improvement and increasing their energy efficiency.

"Thanks to BONO, complying with ISO 50001 is fast and efficient. The tool simplifies the generation of monitoring projects, baselines and other records while maintaining the demanding standards of the standard. With BONO, we optimize our energy management and contribute to sustainability. We recommend this solution to companies committed to efficiency and ISO standards. Likewise, the evolution of the IDbox product to IDboxRT during this year 2023 has meant an outstanding advance in the control of consumption other than energy consumption."
